

# For the price of one gyratory installation you can install two massive Lippmann 5062 Jaws!

**Start crushing now and eliminate gyratory feed hang-ups forever.**

Why wait years to take delivery on a gyratory when you can install two massive, high capacity Lippmann 5062s for the price of one gyratory installation? You'll drastically increase crushing efficiency and eliminate the extra coarse material hang-ups inherent in spider gyratory designs.

Until now, many thought that only a gyratory would hold up in the most demanding, abrasive, hard rock mining and aggregate operations. But the Lippmann 5062 is changing the minds of some of the industry's leading producers, where it has proven to exceed all expectations in place of a gyratory primary crushing station.

Lippmann's 5062 Jaw offers tremendous savings in capital investment, ease of operation, maintenance and wear costs. Unrivaled in high capacity and throughput, no other jaw is built like this. A huge oversized heat treated shaft, larger roller bearings, huge pitman, larger stroke with steeper nip angle, and a much heavier frame combine to offer a lifetime of strength and reliability. Hydraulic toggle cylinders save countless hours and can be adjusted under load.

**Want to experience 100% uptime with redundancy and ease of material handling like never before?** The robust Lippmann 5062 is changing conventional thinking about primary crushing stations.
