

# For the most reliable high tonnage jaw station

## Payne & Dolan came to Lippmann

*Rick Nelson, Site Superintendent,  
Franklin Aggregates, and his Lippmann 5062 Jaw.*

When Rick Nelson, Site Superintendent, and Brian Endres, Area Manager, Aggregate Division for Payne and Dolan chose a crushing equipment manufacturer to engineer and supply a high tonnage primary crushing station for the heart of their impressive Franklin Aggregates quarry operation, they chose Lippmann. Why? "Because for years we've relied on Lippmann products in our crushing equipment fleet and they've always performed well," says Endres. "When it came to selecting Lippmann's massive 5062 jaw, we knew it was a solid design. The one piece pitman, the huge oversized shaft, the heavy iron used to craft the frame, we knew it would hold up to the punishment. We've never had bearing problems with Lippmann jaws, and the hydraulic adjustment on the fly was very appealing to us," Endres continues.

"Lippmann was very good in working with us to meet our specific needs. Lippmann's engineering team designed the complete primary station from finite element analysis through delivery. They implemented our suggestions and site experience, and supplied the complete structure which came together very well," says Nelson. "The Lippmann personnel were great. They delivered what they promised and stood behind it 110%. There was no lag time. The 5062 jaw meets or exceeds the 1,000 tons per hour we were looking for," adds Brian.

If you're looking for a crushing equipment supplier *you* can believe in, contact Lippmann today.
