

- Larger Feeder
- Larger Impactor
- Larger Screen Deck

**TWICE THE PRODUCTION,
SAME NUMBER OF EMPLOYEES**

The Lippmann 6500LP Crushing Plant is the highest producing plant for its size in recycle crushing. Not only does it offer a larger feeder, impact crusher, and screen deck, Lippmann has re-engineered the typical product flow of conventional impact crushing plants to give you the competitive edge.

**UNIQUE PRODUCT FLOW DESIGN
FOR CONTINUOUS PRODUCTION**

Other crushing plant designs require crushed product to turn and exit against the flow, often creating costly bottlenecks. Lippmann's continuous flow design allows rebar to bend and material to discharge smoothly with the rotation of the rotor for uninterrupted production. A heavy duty pan feeder under the crusher prevents conveyor belt damage. This logical flow design handles rebar as long as 10 ft. and delivers significantly greater productivity – consistently.

**ON BOARD CONVEYORS ALLOW EASY,
QUICK TRANSPORT AND SET-UP**

On-board return conveyors mean you only move two pieces of equipment instead of four to the job site. Efficient and fast set-up and tear-down mean greater profits.

**INCREASED PRODUCTION, REDUCED
OPERATING COSTS, REDUCED WEAR**

Lippmann's larger 6500 Impactor Plant delivers up to a 100% increase in production over 4800 range competitive impactor plants, (producers report 300-400 TPH consistently). Customers also indicate up to a 30% reduction in operating costs. Wear costs are also less because the 6500LP delivers 30 to 50% more product per change out. The plant's relatively small footprint offers flexibility to conform to site constraints.
