

WHY THIS SHOULD BE YOUR NEXT JAW CRUSHER...

Lippmann Jaw Crushers offer today's aggregate producer more value. Compare the increased production, outstanding reliability, reduced operating costs and flexibility of a Lippmann Jaw. Its large feed opening, and force-feeding action from the inward and downward eccentric movement of the swing jaw, means increased capacity. Longer curved jaw dies, a non-choking crushing action design, and a larger eccentric throw, result in a reduction in nip angle, a more positive bite, and greater ratio of reduction.

A Lippmann Jaw can have a smaller discharge setting than some other models, allowing for a higher degree of flexibility with related equipment. Positive setting adjustment is easy.

Reliability is the hallmark of a Lippmann Jaw, featuring rugged ribbed

frame construction, heavy duty rock ribs that protect the pitman, forged shaft, and premium quality tapered roller bearings that absorb and withstand radial and thrust shock loads. Finite element analysis techniques assure sound design and maximum strength at all stress points for trouble-free crusher operation.

The Lippmann Jaw is quality engineered for simplicity, easy access, low maintenance and includes reversible jaw dies for increased wear. An optional

lube system is also available.

Lippmann Jaw Crushers are ideal for stationary, portable or skid-mounted installations. Dynamically balanced flywheels minimize vibration, resulting in reduced infrastructure costs.

When it comes to in-pit crushing, who else can offer you this much jaw for the money? Available in a full range of sizes.

THE NAME YOU SHOULD KNOW FOR QUALITY CRUSHING MACHINERY.
