

"I WANTED THE LARGEST, TOUGHEST JAW PLANT BUILT TO CALIFORNIA SPECS. LIPPMANN ANSWERED."

Lippmann 3062
Jaw Plant

Booster Axles. Peerless WHH-4-A
California 2+2 Suspension

"I needed the brute of the industry. The largest, best machine I could buy built to strict California D.O.T. specs," says Tom Channell, President, Dynamic Demolition, Inc. who chose the Lippmann 3062 Jaw Plant for his California Concrete Crushing and Recycling business based in Sacramento.

"When I compared the Lippmann jaw with others on the market, I could immediately see they didn't scrimp on iron. The frame, the shaft, everything was massive.

"Lippmann went way out of their way to engineer the best roadable chassis and axle configuration for our needs. California D.O.T. actually took photos of it to use on their web site as an example of an optimally designed plant.

And because of the incredible productivity of our 3062, we're the only ones out here who can accept any size demolition concrete at no charge. Our Lippmann jaw devours concrete slabs full of rebar with ease, and produces material non-stop, profitably. Plus it provides the flexibility to crush a variety of aggregates we process in the mountains. Based on my experience, if someone wanted to *give* me another jaw plant, I wouldn't take it."
