

# THERE'S NO BIGGER VALUE IN RECYCLE CRUSHING

As a concrete and asphalt recycler, do you really know your material preparation costs?

Before you purchase an Impactor for your primary crushing plant, compare the Lippmann 30x62 Recycle Jaw Plant with any primary machine on the market. You'll crush your operating costs per ton! Because Lippmann offers a huge 30"x62" feed opening that accepts massive slabs of concrete full of rebar, reducing feed time and wear costs, and achieving maximum capacity.

This Lippmann Jaw is a brute of a crusher. It features extra heavy-duty ribbed frame construction, and extra large radial thrust tapered roller bearings lubricated by an automatic oil circulating system for extreme service duty and low maintenance.

A heavy duty forged eccentric shaft provides an exceptionally large eccentric throw. Reversible jaw dies assure maximum jaw life.

Everything about this crushing plant tells you it was engineered for the type of demanding recycle crushing you require. Yet for all its might, the Lippmann 30x62 Jaw Plant is very portable.

With a completely assembled travel height of 13'6", mounted on a high quality chassis designed for easy set-up and tear down, it features a 62"x18" vibrating grizzly feeder, Hardox 400 feed hopper, hydraulic leveling, and transfer points with proper clearances to maximize throughput of rebar and uncrushables.

Want to learn more? Call us today at (800) 648-0486.

Lippmann also supplies superior Secondary Impactor Plants to achieve desired capacities and products in recycling and aggregate operations.

THE NAME YOU SHOULD KNOW FOR QUALITY CRUSHING MACHINERY.
